

I am a subscriber and listener of XM Satellite radio and enjoy it greatly. They offer many fine services and quality audio! Traffic and weather are features that can save lives and should be distributed in as many ways as possible. A monopoly by the NAB on news and weather is not a viable solution to distribution of this information. The Satellite radio in my opinion is a superior method of distribution of programming and should not be restricted. I pay for these services and do not want them restricted or eliminated. Thank you.
